PROFILE

PCB design engineer who takes a board from schematic to manufacturing-ready files: placement, multilayer and RF routing, verification and Gerber/BOM output. I work in KiCad, Altium Designer and EasyEDA Pro, and I deliver clean, documented project files that a fab can build. Clients on Fiverr, Upwork and Freelancer.com receive files ready for JLCPCB, PCBWay or OSHPark.

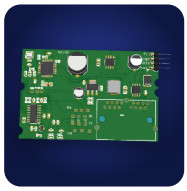

FEATURED CLIENT PROJECTS

Multi-Radio IoT Gateway, 8-Layer PCB

KICAD 10 · FIVERR

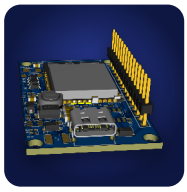

- Laid out from the client's schematic and BOM: 400+ components on an STM32H7B3 board.
- Five RF sections (4× LR1121, 2× Si4463, AT86RF215) with ten edge-mounted SMA connectors.
- 8-output clock distribution network and layer planning for power, grounding and RF.

Load Cell Controller: Reverse Engineering and Repair

KICAD 10 · FIVERR

- No schematic provided: rebuilt the design from the bare PCB and BOM (STM32F103, HX711, CAN daisy-chain).
- Diagnosed four field issues across a deployment of 30+ units and delivered a corrected KiCad revision.
- Turnaround: 2 days plus one post-fabrication revision.

RejsaCAN v3.4 Redesign

EASYEDA PRO · FIVERR

- Dense ESP32-S3 CAN bus node: about 80 components in a 30 × 50 mm footprint.
- USB-C, SN65HVD230 CAN transceiver, microSD, and a buck converter feeding a switched-load LDO.
- Fabricated through JLCPCB.

"Tahir did an excellent job on my PCB project. He was very responsive, professional, and willing to make every requested adjustment until the final package was complete."

PCB Design with Altium Designer: Hands-On
Coursera

EDUCATION

BSc Electrical Engineering
Namal University, Mianwali
2023 – 2027

Pre-Engineering
Cambridge International Science College, Talagang
2021 – 2022

LET'S WORK TOGETHER

Send me your schematic, requirements or a rough idea. I reply within a day.

EXPERIENCE

Freelance PCB Design Engineer

FIVERR · UPWORK · FREELANCER.COM

Remote, worldwide clients

- Design PCBs for clients from requirements through schematic capture, component selection, layout and Gerber/BOM generation.
- Deliver manufacturer-ready files compatible with JLCPCB, PCBWay and OSHPark.
- Work across microcontroller boards, USB interface boards, RF boards and power electronics in KiCad, Altium Designer and EasyEDA Pro.

WHAT I CAN DO FOR YOU

- PCB Layout
- Schematic to PCB
- Multilayer PCB Design
- Component Placement
- PCB Routing
- Footprint and Library Work
- Design Review
- ERC / DRC Verification
- Reverse Engineering
- PCB Redesign
- Manufacturing Documentation
- Gerber / BOM Preparation

HOW I WORK

01
Requirements
Board needs, size, interfaces, constraints

02
Schematic review
Connectivity and components checked

03
PCB design
Placement, layers, routing, power

04
Verification
ERC/DRC and a board review

05
Manufacturing output
Gerbers, BOM, fab files

06
Delivery
Organized files and documentation

MORE PCB PROJECTS

- **Custom ESP32 Dev Board.** 2-layer, USB-C, USBLC6 ESD, AP2112K 3.3 V LDO, RF keep-out.
- **STM32 GPS Tracker.** GPS antenna keep-out, microSD logging, dedicated ground plane.
- **Water Level Indicator.** BC547 stages, LEDs and buzzer, verified in KiCad and Altium.
- **USB to UART Converter.** CP2102, USB-C, ESD-protected data lines, TX/RX LEDs.
- **DC-DC Buck Converter.** Zero ERC/DRC errors, sized copper pour, 3D visualization.

EMBEDDED, AWARDS AND RESEARCH

- **Smart Blind Assistance System.** Winner. ESP32-C6 obstacle detection and alerts · Dec 2025
- **Edge AI Object Detection.** YOLO on Raspberry Pi with live camera · Mar 2025
- **STM32 UART Communication.** Interrupt-based PC control of peripherals · Jan 2026
- **Research poster, LUMS.** Quantization-aware compilation on RISC-V for edge AI · Mar 2026

Have a PCB project in mind?

Send the schematic, requirements or existing files and I will review them and suggest the next step.
